

ANVAYA – Connecting travellers with places, people & stories

SIH25032 · Eco & Cultural Tourism · Jharkhand

The problem – Tourism needs more than another app

Discoverability

Lesser-known eco & cultural sites stay hidden

Fragmented Experience

Places, routes, stories and stays live in separate silos

Local Participation

Guides, artisans and homestays lack visibility

Responsible Travel

Need to manage destination pressure and sensitivity

Actionable Insights

Authorities need usable demand & impact data

What we want to solve

A connected tourism ecosystem — not just a directory.

- Help travellers discover eco-cultural experiences by interest, time & budget
- Promote lesser-known destinations and authentic local activities
- Connect tourists with verified community experiences
- Encourage responsible choices with simple guidance
- Provide stakeholders clear, actionable demand insights

Our solution – ANVAYA

Understand

Capture preferences: interests, duration, budget, start point

Recommend

Build personalised eco-cultural journeys

Experience

Guide travellers through places, stories & routes

Connect

Verified guides, artisans & homestays

Learn

Feedback and data to improve recommendations & support stakeholders

Typical tourist journey — 3 days, ₹8,000

01

01 ▪ Preferences

Ranchi · 3 days · ₹8,000 · Nature + Tribal culture

02

02 ▪ ANVAYA Engine

Matches destinations, routes, constraints

03

03 ▪ Journey

Personalised route with lesser-known cultural stops

04

04 ▪ Experience

Stories, local guides, crafts, food and activities

05

05 ▪ Feedback

Ratings + preferences feed future recommendations

Our USP – Tourism Footprint Intelligence

Recommend journeys that are good for the traveller and the destination

Beyond Personalization

Interest match + budget + route efficiency + destination pressure + environmental sensitivity

Responsible Alternatives

Surface lower-pressure routes with high community benefit

Impact View

Footprint / responsibility indicator per journey — clear, simple

High-level architecture (prototype)

Flow: Tourist App → Backend API → Recommendation (rules + ML) → Journey → Feedback → Continuous improvement

- Tourist App / Web UI: preferences, maps, journeys
- Recommendation Engine: ranking, personalization, responsibility layer
- Maps & Location: geospatial routing & nearby discovery
- Stakeholder Dashboard: analytics, trends, content management

Expected impact – measurable & local

For tourists

Better discovery · personalised journeys · richer cultural context · simpler planning

For communities

More visibility for guides, artisans & homestays · fairer opportunities

For Jharkhand

Broader discovery of eco-cultural sites · balanced tourism growth

For authorities

Actionable trends · feedback · destination-level insights

Success metrics: engagement · local participation · discovery of lesser-known sites · satisfaction · responsible-route adoption

Roadmap — validate before building

Mentor questions & next steps

Validation

Is our problem framing clear and accurate for Jharkhand stakeholders?

USP

Does footprint intelligence differentiate ANVAYA enough?

MVP scope

Which features must be in the first prototype to demonstrate impact?

Validation priority

What should we validate first: demand, data quality, or community onboarding?

📋 Request: mentor feedback items prioritised for next 2 weeks.
